

Make a simple camera

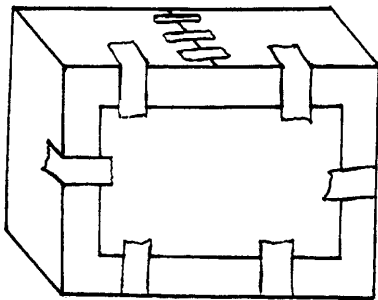

1. Cut a rectangle out of one side of a cardboard box. Leave 1cm all round.

2. Open the top, paint the whole inside surface black and seal it back.

3. Stick tracing paper over the hole you cut out.

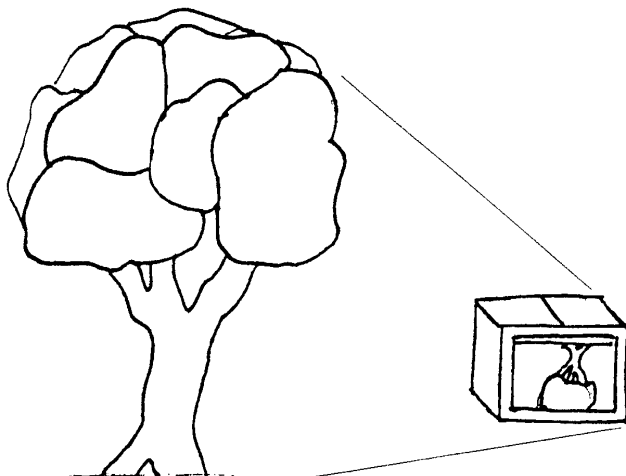

4. In the side opposite make a small hole with a nail.

THINK!

5. Out of doors point the hole towards something bright and look at the tracing paper. What do you see?

6. If you put a dark cloth over the box and over your head as you look, you should see more clearly.

Our souls reflect
the things we
turn them
towards.
